isotopes of, 422
occurrence and production of, 421f, 422–423, 422f
uses of, 423
Cyclotrons, 503f, 505f, 506–508, 506f
FM cyclotrons, 507f, 508–510
synchrotron light sources, 511–512, 511f
synchrotrons, 507f, 508–510

D

D, *see* Absorbed dose, *see* Deuterium
Ḋ, *see* Specific gamma ray dose rate
Dark energy, 340t, 344
Dark matter, 340t, 343–344
Daughter recoil
in alpha decay, 90
in beta decay, 97
in isomeric transition, 106
Db, *see* Dubnium
DBA, *see* Design basis accident
Dead time, 250–253, 250f
Decay, *see* Radioactive decay
Decay energy, 86, *see also* Q value of reaction
of alpha decay, 89–90
of beta decay, 94
of electron capture, 96
of gamma decay, 98
half-life and, 119
Decay heat, of spent fuel, 701, 702f, 702t
Decay rate, 108–109
proportional counter for, 258–259, 259f
Decay scheme, 101f, 103
of actinide elements, 439t
for calcium, 141–142, 142f
Mössbauer effect and, 196–197, 196f
Deformation index, 143, 143f
Deformed nuclei model, 143–145
collective nuclear model for, 144–145, 145f
deformation index, 143, 143f
electric multipoles, 143–144, 143f
unified model of, 145–147, 146f
Degeneracy, 43–44
Degenerate matter, 343
Delayed neutrons, 329
Density measurements, radionuclide gauges for, 201f, 202
Design basis accident (DBA), 632–633
Detection and measurement techniques, 239–296
absolute disintegration rates, 249f, 285–286
Čerenkov detectors, 274
detector properties, 246–253
basic counting systems, 249, 249f, 250f
pulse generation, 247–248, 247f
pulse shape and dead time, 250–253, 250f, 251f
gas counters, 254–262, 255f, 256f
Geiger–Müller counters, 90, 254, 255f, 256f, 260–262, 260t
ion chambers, 255–258, 256f
proportional counters, 88–90, 254, 256f, 258–260, 259f, 260t
microchannel plate detectors, 274
pulse counting electronics, 275–283
amplifiers, 276–277
counters and rate metres, 277–278
gamma spectrometry, 279–283, 280f, 282f
multichannel analysers, 278–279
preamplifiers, 275–276, 275f
single-channel analysers, 277
sample preparation for, 286–288, 287f
scintillation detectors, 268–273, 269f, 271t
gas, 271
liquid, 272–273, 272t, 273f
solid, 269f, 273
semiconductor detectors, 262–268, 263f
for alpha decay, 90
intrinsic detectors, 268, 268f
lithium-drifted detectors, 266–267, 267f, 268f
surface barrier detectors, 264–266, 265f, 266f
special counting systems, 283–284
statistics of counting and associated error, 288–293, 289f
background activity corrections, 290
χ-square test for, 291
one-atom-at-a-time measurements, 291–293, 292f
Poisson or Gaussian distribution for, 288–290, 289f
standard deviation for, 288–291, 289f
track measurements, 240–246
cloud and bubble chambers, 240–241, 241f
SSNTD, 241–246, 243f, 244t

Detection efficiency, *see* Counting efficiency
Deuterium (D), 32
  binding energy of, 72
  isotope effect in, 41–42
  mass defect of, 69–70, 72
  optical emission spectra for, 42–43
Deuteron
  photodisintegration of, 336
  water range of, 172, 172t
Dicentric aberrations, 457
Dielectric constant, radiolysis and, 225
Dielectric track detectors, *see* Solid-state nuclear track detectors
Dirac wave equation, 22–23
Direct interaction model, 324–327, 325f, 326f, 327f
Disequilibrium, 388–390, 389f
Disintegration rates, *see* Absolute disintegration rates
Displacement energy, 216
Distribution constant, radioactive tracers in determination of, 569, 570f, 571f, 572f
Distribution ratio, 553–555
DNA
  induced breaks in, 450, 450t
  ionization clusters in, 450, 450t
  radioactive tracers in, 577
  repair mechanisms, 451
Doppler broadening, 610–611
Dose build-up factor (B), 189–190, 190f
Dose coefficients, 480t
Dose fractionation, 458
Dose limitations, 476
Dose measurements, 229–232, 230f
Dose rate, 214
  technical uses of small, 235–236
Dose rate metres, 229, 230f, 232, 257
Dose–effect curve, 473f
Dose–response curves, 456f, 456–457
Double beta decay, 94–95
Double escape peak, 268f, 281
Double-strand break, 452
Down quark
  in matter, 27
  properties of, 28t
Drift velocity, 254
Dubnium (Db), 440t, 442
Dynodes, 270–271

E

Earth
  elemental composition of, 347–349, 348f
  evolution of, 368–371, 369f, 370f
E_B, *see* Binding energy
EBA, *see* Electron beam accelerators
EBR-1, *see* Experimental Breeder Reactor
EC, *see* Electron capture
Ecology, radioactive tracers in study of, 574–575
ECT, *see* Emission computer tomography
EGP, *see* Electricity-generating district heating reactor
Einsteinium (Es), 424, 425f
Elastic scattering, 297, 304–305, 306f, 306t
Electric fields, ions in, 35–36, 35f
Electric multipoles, 143–144, 143f
Electricity-generating district heating reactor (EGP), 631
  prevalence of, 598, 598t
Electrochemical properties, of radioactive tracers, 552–553
Electrolysis, for isotope separation, 56
Electromagnetic force
  atom and, 26
  strength and exchange particles of, 17t, 18
  weak interaction force compared with, 18–19
Electromagnetic isotope separation, 58
Electron beam accelerators (EBA), for radiation chemistry, 232
Electron capture (EC), 68, 96
  decay energy of, 96
  valley of β-stability and, 77–78, 77f, 78f
Electron emission (β^-), 67–68, 95
  antineutrino creation in, 92
  decay energy of, 94
  valley of β-stability and, 77–78, 77f, 78f
Electron mobility, radiolysis and, 225, 225t
Electron neutrino
  creation of, 23–25
  properties of, 25, 28t
Electron spectrometry, for chemical analysis, 192–194, 194f
Electron spin resonance (ESR) techniques, 228
Electron structure
  of actinide elements, 430t, 432
  of actinium, 431–432
  nuclear spin and, 147–152
    atomic beams, 149–151, 150f
