Trace concentrations, chemistry of, 547–555
adsorption, 548–549, 549f
electrochemical properties, 552–553
equilibrium reactions, 550
precipitation and crystallization, 550–552, 552f
radiocolloid formation, 550
separation methods, 553–555, 554f, 564–566, 565f, 566f
Tracers, *see* Radioactive tracers
Track measurements, 240–246
cloud and bubble chambers, 240–241, 241f
SSNTD, 241–246, 243f, 244t
Tramp uranium, 628
Transactinide elements, 427–430, 440t
chemistry of, 442–443
properties of, 441–443
synthesis of, 428–430, 440t
Transformer–rectifier accelerators, 496–497, 496f
Transient equilibrium, 116–117, 116f, 117f, 119
Translational energy, 46
in bimolecular reaction, 51
Transmission coefficient, 51–52
Transmission computer tomography (TCT), 577–579, 578f
Transuranium elements, 406, 407f
present levels in ecosphere, 763–765, 764t, 775t
recoil techniques in synthesis of, 529–530, 530f
release into environment of, 762–763, 763t
Triple point detection, radionuclide gauges for, 202
Triplet states, phosphorescence of, 226
Tritium (T), 32
cosmogenic, 379–380
Tunnelling, 317–319, 318f

U

u, *see* Universal mass unit
U, *see* Uranium
Uncertainty principle, *see* Heisenberg uncertainty principle
Uncharged radiation, energy transfer with, 212
Unified model of deformed nuclei, 145–147, 146f
Universal Linear Accelerator (UNILAC), 501
Universal mass unit (u), 33
Universe
age determination in, 346–347
components of, 339, 340t
dark energy, 340t, 344
dark matter, 340t, 343–344
elemental composition of, 347–349, 348f
expansion of, 345–346
fusion in stars, 348f, 354–361, 355f
helium burning to iron, 358–361, 359f, 360f
hydrogen burning to helium, 354–358, 356f, 356t, 357t
galaxy age, 367–368
light, energy flux and Hubble law, 344–346, 345f
microwave radiation and Big Bang, 349–350
Milky Way galaxy, 340, 341f
age of, 367–368
our place in, 340–350, 341f, 342f
star ignition, 353–354
structure of, 340, 342f
UOT, *see* Uranium once-through
Up quark
in matter, 27
properties of, 28t
U-Pu fuel cycle, *see* Uranium-plutonium
Uranium (U), 413–418
^{238}U decay, age determination with, 396–397, 397f
binding energy of, 74
decay series of, 388–389
discovery of, 2
enrichment of, 54–55
continuous ion-exchange, 60
gas centrifugation, 59–60, 59f
gaseous diffusion, 57–58
photoionization and photoexcitation processes, 61–62
stationary-walled gas centrifugation, 56f, 60–61
fission of, ^{235}U, 328–329, 328f, 331
isotopes of, 413
isotopic data for, 34t
isotopic line shifts for, 42–43
lead found with, 41
nuclear data for, 604t
nuclear reactions of, 605f
occurrence, resources and production capacity of, 413–414, 414t
production techniques for, 415, 416f, 417t
in thermal breeder, 670–671, 670f
production wastes, 417–418

radioactivity of, 2, 3
species in water, 767f, 769
SSNTD for, 243f, 245
uses of, 418
Uranium once-through (UOT), 687f, 706
Uranium ores, 414
gamma-radiation from, 388
Uranium radioelement series, 4, 382–386
Uranium-plutonium (U-Pu) fuel cycle, 706–708, 707t

V

Valley of β-stability, 77–79, 77f–78f
for promethium, 79, 80f
for technetium, 80–82, 81f
Van de Graaff accelerators (VdG), 498f, 499–502
VdG, *see* Van de Graaff accelerators
Vector quantity, 131–132
Velocity
average particle, 44
of charged particles, 174f, 175
of electrons, 22–23
gravitational pull and, 343
most probable, 45
radial, 345–346
in recoilless absorption, 197–198, 197f
Very large whole-body doses, 446
Vibrational energy, 46
in bimolecular reaction, 50–51, 50f
in deformed nuclei model, 144–145, 145f
Vibrational quantum number, 46
Virgo supercluster, 340
V_n, *see* Nuclei volume
Vodo-Vodyanoi Energetichesky reactors (VVER), 657
overview of, 659
Void coefficient, 630
Voltage-sensitive preamplifiers, 275, 275f
Volume energy, in semiempirical mass equation, 76–77
VVER, *see* Vodo-Vodyanoi Energetichesky reactors
VVR, history of, 12

W

W^-
strength and range of, 17t
as weak force mediators, 29
W^+
strength and range of, 17t
as weak force mediators, 29
Waste repositories
natural analogues for, 776–777
Oklo reactor and, 777–778
performance assessment of, 778–786
canister dissolution, 772f, 774f, 779f, 780–782, 781f
migration from, 781f, 782–786, 784t, 785t
release from bitumen and concrete, 782
release scenarios, 772f, 779–780
speciation calculations for, 767f, 769–776, 775t
in solution, 771f, 773–776
Waste streams
in isotope separation, 52–53, 53f
from reprocessing, 723–728, 724t
environmental releases of, 727–728, 727t
gaseous, 723–725
liquid, 725, 726t
organic, 726
solid, 724t, 726–727
Water
electromagnetic radiation in, 213f, 233
neutron moderation with, 606–607, 606t
quenching effect of, 272, 273f
radiation effects on, 219–222, 222f
radiation range in, 172, 172t
radiolysis of, 209–210, 220–221, 220f, 221t
spur reactions in, 220–221, 221t
Wavelength shifters, 270
Waves
particles and, 19–20
photons as, 20
Weak interaction force
reaction time of, 18–19
strength and exchange particles of, 17t, 18
strong nuclear force compared with, 18–19
Wear, radioactive tracers used in studies of, 588
Westinghouse design, of PWR, 625, 626f
White dwarf, 354
Whole-body counters, 283
Whole-body counting, 489
